

Introducing
Tru-Cuff™
from AES, Inc.

Tru-Cuff™ LM & TT

The only inflation syringe with a cuff pressure indicator

The Tru-Cuff™ indicates pressure in endotracheal tube and laryngeal mask cuffs, minimizing the potential for airway trauma from over inflation of the cuff. The Tru-Cuff™ allows the clinician to easily inflate airways to a clinically recommended pressure with a single patient device. Easy to read color indicator bands provide you with at-a-glance feedback indicating cuff pressure, therefore improving patient safety and minimizing the risk of airway damage. The Tru-Cuff™ is available with the complete family of AES Ultra laryngeal masks or can be purchased as a stand-alone for laryngeal masks and endotracheal tubes.
